

You must stop this effort by the radio broadcasters to limit local options. This is not a mere censorship issue, but more of a monopoly issue. XM has every right to broadcast local, national, international broadcasts that are legal in nature to anyone subscribing to their services. The future is instant communication and information. And AM/FM broadcasts cannot bring the instant data necessary for the future of devices. Where one can instantaneously learn of car accidents or of detours or weather warnings and provide an alternate route. or message, where AM/FM can not give you the same information. AM/FM is limited to voice. XM has the potential to provide data to subscribers as well. This will be a huge technology jump. And this is a future that AM/FM just cannot provide at any time. The airwaves need to be free to grow to provide the needs of its people. Thank you.
